To whom it may concern.

As project manager, currently completing the 4-storey administration and surgical ward at Brits Mediclinic, I had the opportunity to work with Sydney Little and the crew of 'Fulcrum Flooring'.

Mediclinics' new specification, with regards vinyl flooring, has eliminated any form of self-leveling screeds and thus we appointed 'Fulcrum Flooring' to grind and sand down three of the suspended concrete slabs (+/- 3000sqm) to achieve a surface free of defects and within tolerances to receive such vinyl flooring.

It was an absolute pleasure working with 'Fulcrum Flooring'. Not only were they professional from the outset (meeting start and critical dates) but their equipment is also state of the art and their staff are friendly and accommodating. There was constant supervision and any queries were always attended to. Considering that all internal walls had been erected, including built-in steel door frames, their attention to detail and finer works was much appreciated.

I would highly recommend 'Fulcrum Flooring' to any party requiring the services they can supply.
